## Research Experience

### Huawei 2012 Laboratories

Research Intern

Shanghai, China

Sept. 2024 – Aug. 2025

**Topic:** Privacy-Preserving LLM Inference in Untrusted Clouds

- Gap Analysis:** Identified critical privacy leaks in cloud inference due to vulnerable externalized KV-caches.
- Vulnerability Analysis:** Analyzed reconstruction risks, providing the **first empirical evidence** of prompt leakage in Llama/Qwen architectures without raw input access.
- System Design (KV-Cloak):** Architected a lightweight obfuscation defense natively integrated with **PagedAttention**, mitigating privacy risks while ensuring lossless accuracy with **<1% latency overhead**.
- Impact:** Core algorithms were integrated into **large-scale production inference frameworks**; yielded 1 top-tier paper and 1 patent.
